

FOODSTUFFS THAT INCLUDE SULFUR-CONTAINING FLAVORINGS

Abstract

- 5 A food composition containing a flavoring agent of a precursor mixture of flavorings. The precursor mixture of flavorings includes at least one polysulfide and at least one non-volatile source of sulfur having at least one sulfhydryl group. The precursor mixture generates an aromatic note due to the formation of thiols when heated above 50°C to provide a roasted or grilled aromatic flavor note to the food composition.
